

ETHICAL HACKING TRAINING

To beat a hacker, you need to think like one

Cyber attacks are not only on the rise, they are also getting more sophisticated

Cyber attacks are now emerging as the "new normal", becoming more frequent and technologically sophisticated. Attackers target organizations of all sizes, in a variety of industries. Every organization has valuable information which attracts the interest of malicious parties. In most cases, organizations do not even realize they have been hacked, until their data becomes publicly available, or is found as an item up for sale in a dark-web market!

Organizations need to learn how to protect themselves against cyber attacks, since a successful attack can cause major disruptions in business operations and can severely damage the organization's reputation.

How we can help

BDO's Cyber Academy has developed a unique programme to suit your ethical hacking training needs. The training program provides detailed ethical hacking insights, that enables IT professionals to discover vulnerabilities and recommend solutions for tightening network and system security and protecting data from potential attackers.

Focus is placed on penetration testing tools and techniques that ethical hackers use to protect IT systems, including programmatic review and continuous improvement planning.

WHY BDO FOR YOUR TRAINING NEEDS?

- ▶ Do not expect your typical training session. Our interactive course actively engages and motivates attendees, ensuring the best learning result.
- ▶ Our experienced instructors have trained over 5.000 individuals.
- ▶ Our team includes professionals with a wide range of professional qualifications, including CISSP, CISA, CEH, CIPP/E, EDRP & Security+

BENEFITS

- ▶ Enables your employees to understand how hackers think and act.
- ▶ Empowers employees to effectively use the latest hacking frameworks, techniques and tools.
- ▶ Provides a comprehensive overview of modern-day security attack vectors.
- ▶ By the end of the course, your IT employees will be ready to adequately test the security status of your organization.

TOPICS COVERED

 Reconnaissance	 Network scanning & enumeration	 System hacking
 Malware	 Hacking Web servers & applications	 Wireless & Mobile hacking
 DDos attacks	 Social engineering	 Documenting a penetration test

VARIOUS TRAINING PROGRAMMES TO CHOOSE FROM

The minimum duration of our training programme is 10 hours. However, we can tailor your training, based on your organizational needs, for up to 38 hours of content.
