

# DISASTER RECOVERY & BUSINESS CONTINUITY TRAINING

Can your business survive a disaster?

## Disasters happen. Are you prepared?

Businesses of all sizes create and manage large volumes of data. Most of this data is vital to the survival and continued operation of the business. The impact of data loss or corruption, from either physical disasters (such as fire, flood or a pandemic) or man-made disasters (such as system failures, human errors or hacking), could be significant. But planning for a disaster is not just about data. What if your premises become unusable? What about losses in human capital? Is your business prepared to deal with such unfortunate events? Do you have a structured procedure to resume your business activities within a pre-determined period of time?

## How we can help

BDO's Cyber Academy has developed a unique programme to suit your business continuity training needs. We can train your employees to identify mission-critical continuity needs, define sources of risk, conduct a Business Impact Analysis (BIA) and ultimately implement a complete Business Continuity Management System (BCMS) for your organization. Through integrated communication and engaging instructor-led training, BDO can help your employees identify all the necessary elements for building a thorough disaster recovery and business continuity plan. Our tailor-made, interactive, sessions can help shield your company's reputation, competitive advantage and operational stability.

## WHY BDO FOR YOUR TRAINING NEEDS?

- ▶ Do not expect your typical training session. Our interactive course guarantees that participants are actively engaged and motivated, ensuring the best learning result.
- ▶ Our experienced instructors have trained over 5.000 individuals.
- ▶ Our team includes professionals with a wide range of professional qualifications, including CISSP, CISA, CEH, CIPP/E, EDRP & Security+

## BENEFITS

- ▶ Enables your employees to understand mission critical continuity needs.
- ▶ Empowers employees to use proper judgement when planning for potential disasters.
- ▶ Includes the acquisition of a wide range of proactive controls, able to reduce the possibility of a disaster happening in the first place.
- ▶ Teaches your employees how to identify, document, assess and prioritize business processes.

## TOPICS COVERED

Detecting & preventing disasters

Conducting a BIA

Facility protection
