INFORMATION SECURITY AWARENESS TRAINING
Your employees are your biggest cyber security threat!

Employee (mis)actions lead to cyber security incidents

A risk from within. Employees make mistakes that put your company's data and systems at risk. They don't usually do that because of malicious intent, or even because of carelessness - they just don't have the necessary knowledge to early identify the many ways that attackers use to target your organization. Cyber security incidents are costly, not just financially, but also in terms of disruption and reputational loss. The latest (2020) research by the Ponemon Institute, estimated the worldwide average cost of a single data breach at €3.3m. Cyber security is justifiably the number one concern of business leaders.

How we can help

BDO's Cyber Academy has developed a unique programme to suit your security awareness needs. Our programme sets employees up for success, by instilling best practice knowledge and practical know-how into the methods attackers commonly use. Through integrated communication and engaging instructor-led training, BDO can help your organisation effectively fight cyber crime and significantly reduce your exposure risk. Our tailor-made, interactive, sessions can help shield your company's reputation, competitive advantage and operational stability. The ultimate goal is to achieve a long term shift in the attitude of employees towards security - from top management to the last employee - whilst promoting a cultural and behavioural change within the organization.

WHY BDO FOR YOUR TRAINING NEEDS?

▶ Do not expect your typical training session. Our interactive course guarantees that participants are actively engaged and motivated, ensuring the best learning result.
▶ Our experienced instructors have trained over 5.000 individuals.

▶ Our team includes professionals with a wide range of professional qualifications, including CISSP, CISA, CEH, CIPP/E, EDRP & Security+

BENEFITS

▶ Increases security awareness level of employees.
▶ Empowers employees to use proper judgement when dealing with potential threats.
▶ Enables an organizational culture shift towards a more secure environment.
▶ Reduces the number and time spent on incidents - prevention is always better than treatment!
▶ Can be used towards demonstrating compliance with GDPR & ISO 27001

TOPICS COVERED

Social engineering	Computer security	Social networks
Identity theft	Passwords	Wireless & Mobile security
